

Supplementary Fig. 2. IDH2 deficiency has no effect on autophagy in MDA-MB-231 cells. MDA-MB-231 cells were transfected with siIDH2 and then incubated for 48 hours. p62, PINK1, LC3, and IDH2 protein expression were detected by immunoblotting. Relative protein levels were quantified by densitometric analysis. All experiments are representative of three independent experiments. IDH2, isocitrate dehydrogenase 2; siIDH2, small interfering IDH2 RNA.
